

FIG. 4

600

1-way	2-node	2-way	32-way	4-way
6-way	8-way	A/DO	application/recovery	applications
AT&T	back-ups	backups/restore	bringing online	callback
campacks	cluster failover	cluster failover	cluster management	cluster
cluster administration	clustered services	clusterformation	clusterhive	cluster management
clustermembership	clusteredotic	clusteroflocalresources	clusteredservers	clusterreplication
clusterprivatenetwork	clustergroup	clusterresources	clusterservice	clustervirtualserver
Clustering	COM	communicationsinterface	configurationaldatabase	configurationinformation
connectionentry	connection hash table	connection scheduling	Convoy	creating a cluster
cross-connect	database	databasemanager	database-server	DCOM
delay	detect failure	detected failure	detected load-balances	detected resource failures
device connection	DNS	dns	DNS server	dns web server
EIDE	event-service	eventing	eventlog replication	eventlog application manager
failback	fail-over	failover manager	fault tolerance	file server
forming a cluster	group preferences	GUM	heartbeat	heartbeats
high availability	high volume server	ICMP handling	inter-connection	joining a cluster
LAII segment	latency	leaving a cluster	load balancer	load balancing
load sharing	load-balancing	log manager	low-latency	multiple accounts
migrating a setprogram	managementmanager	logging	MB	multiple servers
network address	MB	node availability	node manager	nodes
non-cluster service	notificationthread	offline	online	packet-forwarding
port numbers	port switch	operator resources	RAID	real servers
reconnect	recover	recoverfailure	recoveringlog	redirectpackets
registrykeydata	registrykeys	registrytree	resource	resource abstraction
resource-DLL	resourcegroup	resources	remote instrumentation	remote monitoring
resource-monitor	resources-monitors	RPC	remote monitoring	remote monitoring
SCSI	servercluster	serverclusters	session-data-information	session data information
sharednothing	shutdown command	simpleserver	snapshot	stale connection
starting a resource	startup	survivingnode	tape backup	transactionserver
two-node	update manager	via Direct Routing	vba NAT	via NAT
virtualserver	virtualservers	VSS	web server	WLBS
